of your choice

An additional, innovative service for your guests

OrangeAudio provides a discrete audio solution for the hospitality industry, enabling your guests to enjoy wireless music in the hotel room.

A great customer experience

The OrangeAudio One is very easy to use. It enables your guests to listen to their own music on their smartphone, tablet or laptop using for example Spotify, iTunes or internet radio. Additionally, you are able, as a hotel, to offer playlists to extend the atmosphere of your hotel. There's no installation required of any software, drivers or app's.

Theft and vandalism minimised

The OrangeAudio One consists of a very compact, powerful Bluetooth amplifier along with a set of (flush) loudspeakers. It's installed completely out of sight, eliminating theft and vandalism.

Invisible speakers

For every room size, a perfect speaker is being offered. A multi-room setup (e.g. hotel room and bathroom) is offered as well. On top, OrangeAudio offers entirely invisible speakers.

Great design

OrangeAudio loudspeakers have an extremely flat, borderless grill. This grill can easily be sprayed in a colour of choice minimising its presence. Because of this, the loudspeakers perfectly fit a classic as well as a modern designed hotel room without any compromises related to its sound.

Customised

The OrangeAudio One comes personalised with your hotel name and room number and is equipped with a PIN code. The maximum audio output can be set to a level considered desirable.

Easy installation, no maintenance

The OrangeAudio One and the corresponding loudspeakers are maintenance free. By using high-quality components, like Kevlar and aluminium and the lack of moving parts (such as fans), a problem free operation is assured. Installation only takes about 10 minutes.

Energy efficient

OrangeAudio One has a very low power consumption and switches off automatically if a guest is not in the area.
